"This book includes a selection of world-class chapters addressing current research, case studies, best practices, pedagogical approaches and strategies, related resources and projects related to e-learning"--Provided by publisher. Unique ready reference for all complementary medicine, massage therapy and manual therapy practitioners and students alerting them to 'red flag' symptoms which should be referred for Western medical investigation or emergency medical treatment. When can a patient be safely reassured and when do they need further investigation or treatment? 'Red flags' are clinical signs that suggest a patient needs prompt investigation and treatment for a potentially dangerous situation. Therapists increasingly find themselves working alongside conventionally trained doctors and nurses and it is vital for them to understand conventional medical diagnoses, symptoms and treatments and, crucially, to recognise warning signs of serious disease. This is essential in order to be a safe practitioner. Clare Stephenson's The Complementary Therapist's Guide to Red Flags and Referrals meets this need by providing an easily accessible reference to 'red flag' symptoms, designed especially for therapists. It

offers guidance on how best to respond to those symptoms and signs of disease which can be readily discerned through routine history taking and basic examination of the body. The guidance is in language which is accessible to therapists, and clear advice is offered on when to refer patients to conventional medicine practitioners and how to communicate with doctors when making a referral. Clinical syndromes which merit rapid response are summarised for ease of reference. This book uses real-world clinical case analyses of hot topics to provide insights into noninvasive mechanical ventilation (NIV). Written by leading international teachers and experts, it features a selection of "major controversial topics in clinical practice" and demonstrates how these cases can be used to teach about NIV. It then presents a discussion of the topics in various scenarios (anesthesiology, critical care, emergency, pneumology and sleep medicine, as well). The chapters allow readers to develop a case-by-case understanding of NIV in acute and chronic respiratory disorders, and perioperative and in intensive care patients, also thanks to Electronic Supplementary Materials. Lastly the authors summarize five key points / recommendations. This book is an attractive resource also for universities / educational seminars / national and international postgraduate courses and hot-topics sessions at national/international congresses.
