I shall use my own past work in respect to experimentation, and shall answer the questions apart from what I may conceive to be the wishes of the questioners themselves. There are two big problems that science still has not resolved. They are: What are we? Where do we come from? These two questions have troubled people for centuries. 150 years ago, Charles Darwin wrote two books: "On the Origin of Species" and "The Descent of Man, and Selection in Relation to Sex". In these two books, the theory of species evolution was proposed: all species are constantly evolving; the present people and all species are formed through natural selection. The basis of this theory is based on the comparison of biological forms. Now, knowing that all the genetic information of living things is completely determined with DNA, is evolution still correct? Did humanity evolve from apes? This book will answer these questions.
