The role of employment in poverty-reduction programmes in developing countries has received considerable attention the world over. Many new employment opportunities in many developing countries are created in the informal sector where the rate of growth may be higher than that of the formal sector. Dairy markets offer good opportunities for non-farm rural and urban employment. This may particularly be true in informal milk markets, which rely less on modern milk processing equipment and more on traditional labour-intensive technologies. The case studies from Kenya, Bangladesh and Ghana provide an opportunity to gain strategic insights into how small-scale dairy marketing and processing can contribute significantly to rural and urban employment, most of which occurs in the informal sector. The capacity for small-scale dairy processing and marketing to generate jobs in rural communities, as well as in peri-urban and urban areas, is demonstrated. Although the evidence presented here is based on simple case studies and should be taken as only indicative, it nevertheless demonstrates the strong potential for even small quantities of milk to generate employment in rural and peri-urban areas. This publication provides information on the impact of animal feeds on food quality, food safety, and the environment, and thus improves the basis for managing such risks. The book brings together in printed form six reviews from the FAO electronic journal AGRIPPA (available online). Dynamics of Civil Structures, Volume 2: Proceedings of the 39th IMAC, A Conference and Exposition on Structural Dynamics, 2021, the second volume of nine from the Conference brings together contributions to this important area of research and engineering. The collection presents early findings and case studies on fundamental and applied aspects of the Dynamics of Civil Structures, including papers on: Structural Vibration Humans & Structures Innovative Measurement for Structural Applications Smart Structures and Automation Modal Identification of Structural Systems Bridges and Novel Vibration Analysis Sensors and

Control Provides an introduction to radioactivity and radiation with an emphasis on analytical methodology for determining radiounclides in food. Background information covered includes radioactivity in the environment, metabolism of radiation in humans and animals, and radiounclides in the food chain. Manual of Temporomandibular Disorders is a four-color, softcover handbook of information on temporomandibular disorders, an array of medical and dental conditions that affect the temporomandibular joint (TMJ), masticatory muscles, and contiguous structures. The book will provide evidence-based, clinically practical information that allows dentists to diagnose TMD accurately, rule out disorders that mimic TMD (that is, make a differential diagnosis), and provide effective therapy for most patients. This title offers comprehensive coverage in a compact package. The book's tone is conversational, with a focus on solving TMD problems at chairside. The author's crisp, engaging writing style allows the clinician to find precise answers quickly, without wading through a morass of detail. knowledge alive and relevant. Executive Functions in Children's Everyday Lives captures the diversity and complexity of the executive system that underlies children's everyday life experiences. Acquisition of executive functions, such as interpreting communication cues and the perspectives of others, is foundational to and a function of children's early social and communicative competencies. From the soccer field to the classroom, executive functions support children's strategic thinking and control of their environment. Knowing about executive functions and how this system of cognitive resources emerges in young children is important in understanding children's development. Recent research points to the importance of also considering environmental influences on the executive system. This book is unique in its focus on how experiences in children's early lives influence and are influenced by executive functions. Viewing executive functions through this broad lens is critical for professionals who intervene when children's access to executive functions is less than optimal. This book addresses a wide range of topics, including the neurological basis of executive functions in young children, the assessment of children's executive functions, theoretical and historical conceptions of executive functions, the relations between executive functions and theory of mind, multilingualism, early school transitions, and the relationship of executive functions to Autism and ADHD. This volume will be useful to professionals in applied psychology, undergraduate and graduate students, and social science and applied researchers.
