Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle. This Proceedings volume gathers outstanding papers submitted to Proceedings of China SAE Congress 2018: Selected Papers, the majority of which are from China - the largest car-maker as well as most dynamic car market in the world. The book covers a wide range of automotive topics, presenting the latest technical advances and approaches to help technicians solve the practical problems that most affect their daily work. It is intended for

researchers, engineers and postgraduate students in the fields of automotive engineering and related areas. "Dodge 100 is the official, Dodge-licensed complete illustrated history of the legendary American automotive brand. From Horace and John Dodge's dealings with Henry Ford, through the war years, and into the modern age with cars like the Viper and Dodge Dart, Dodge 100 Years is the authoritative history of one of the world's first (and best) automakers"-- The Lavi fighter program, the largest weapons-development effort ever undertaken by the State of Israel, envisioned a new generation of high-performance aircraft. In a controversial strategy, Israel Aircraft Industries intended to develop and manufacture the fighters in Israel with American financial support. The sophisticated planes, developed in the mid-1980s, were unique in design and intended to make up the majority of the Israeli air force. Though considerable prestige and money were at stake, developmental costs increased and doubts arose as to whether the Lavi could indeed be the warplane it was meant to be. Eventually the program became a microcosm for the ambitions, fears, and internal divisions that shaped both the U.S.-Israeli relationship and Israeli society itself. But the fighter never made it to operational service, and until now, the full breadth and significance of the Lavi story have never been examined and presented. *Lavi: The United States, Israel, and a Controversial Fighter Jet* traces the evolution of the Lavi fighter from its genesis in the 1970s to its scrapping in August 1987. John W. Golan examines the roles of Israeli military icons and political leaders such as

Ezer Weizman, Ariel Sharon, Menachem Begin, and Yitzhak Rabin in the program and in relation to their counterparts in the United States. On the American side, Golan traces the evolution of government policy toward the program, detailing the complex picture of the U.S. foreign policy apparatus and of U.S.-Israeli relations in general—from President Reagan's public endorsement of the program on the White House lawn to Defense Secretary Caspar Weinberger's unremitting attempts to cancel it in succeeding years. The astronomical rising costs of modern combat has resulted in many countries being deprived of purchasing a modern combat aircraft and this has had an adverse effect on their security. Many nations have tried to undertake cost-effective measures for their defence needs. Countries can either purchase very expensive modern aircraft or buy older aircraft that can be expensive to operate due to their high maintenance requirements. The Pakistan Air Force had initiated the plan to co-develop an affordable modern multi-role fighter aircraft with China. Chengdu Aircraft Corporation (CAC) in collaboration with Pakistan Aeronautical Complex (PAC, Kamra) have jointly developed the JF-17 Thunder combat aircraft (also known as the FC-1 Xiaolong Fierce Dragon in China). JF-17 Thunder is a sophisticated light-weight multi-role, all weather, day/night fighter aircraft that is manufactured by Pakistan and China. The JF-17 Thunder has become a very cost-effective aircraft that costs very little compared to other modern aircraft. Many countries have shown an interest and a few have started to make orders. Some have described the JF-17 as the 'Ultimate MiG-21' arguing

that the Chinese/Pakistani JF-17 builds on a classic warplane - although it has no resemblance and its level of sophistication is comparable to current advanced fighter aircraft on the market. This very modern and capable aircraft has the potential to become a potent platform that can serve with numerous air forces across the world. One ship could revolutionize submarine warfare as we know it: the USS Snare. A robotic combat sub carrying no crew, the Snare has proven unbeatable in sea trials. And now it has fallen into the hands of an unseen enemy. The Snare's first casualty: the nuclear sub carrying the son of former admiral Michael Pacino. The only man who can match wits with the Snare, Pacino reenters the game in a high-tech underwater battle unlike any that's been fought before, one that could engulf the world in war—and bring him face-to-face with his nemesis... LIFE Magazine is the treasured photographic magazine that chronicled the 20th Century. It now lives on at LIFE.com, the largest, most amazing collection of professional photography on the internet. Users can browse, search and view photos of today's people and events. They have free access to share, print and post images for personal use. Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle. In December 1986 the Northrop Corporation terminated its F-20 Tigershark fighter aircraft program. The program had been in existence for over ten years and had cost over \$1.2 billion. The F-20

program was unique because it was privately funded--i.e., North and its subcontractors covered all of the costs. Northrop wrote off the program costs quarterly, so despite the huge loss, the company continued to prosper. Its other government contracts more than made up for the F-20 expenditures. Northrop and many observers claimed that, from a technical point of view, the program was a resounding success. In point of fact, no one can know. No F-20s were ever sold. There is no doubt that the F-20 program was a marketing failure. There is however, disagreement about why this was so. This paper examines the F-20 program from both a research and development (R & D) and a marketing perspective. We state why the F-20 was built and we show how the F-20 program drew from a Northrop philosophy of what an export fighter should be. We examine why Northrop considers the F-20 R & D effort to have been successful. This examination leads us to discuss the problematic issue of finding and using appropriate measures of merit in evaluating a fighter aircraft system. We present some of our thoughts on why the F-20 was such a dismal failure in the market place, and what marketing lessons should be drawn from that failure.
