This book constitutes the refereed proceedings of the 13th Annual International Symposium on Algorithms and Computation, ISAAC 2002, held in Vancouver, BC, Canada in November 2002. The 54 revised full papers presented together with 3 invited contributions were carefully reviewed and selected from close to 160 submissions. The papers cover all relevant topics in algorithmics and computation, in particular computational geometry, algorithms and data structures, approximation algorithms, randomized algorithms, graph drawing and graph algorithms, combinatorial optimization, computational biology, computational finance, cryptography, and parallel and distributed algorithms.

Strategic Highway Research Program (SHRP) Protocol 46, "Resilient Modulus of Unbound Granular Base/Subbase Materials and Subgrade Soils", was the specified procedure for laboratories performing resilient modulus tests on research samples of unbound cohesive subgrade soil obtained from Long-Term Pavement Performance (LTPP) field sites. P46 requires a test system that includes a triaxial pressure cell component, a closed loop electro-hydraulic repeated load component, and certain load and specimen response control, measurement, and recording components. Two elements of P46 testing were particularly important: verification that the system was calibrated and yielding reasonable results and a practical means of performing quality checks on a daily or more frequent basis. Worksheets, supporting data, analyses, final comments, and conclusions are presented.

Making Mathematics Meaningful-For Students in the Intermediate Grades is an invaluable resource for anyone interested in helping students reach the key learning outcomes of any mathematics curriculum. Developed through live and videotaped classroom observation and through diagnostic and achievement interviews with students, Making Mathematics Meaningful is a research-based guide to mathematics education that eschews outdated models based primarily on memorization and repetition in favor of a more holistic approach that encourages students to develop their mathematical reasoning skills through problem solving. This approach not only teaches students to become critical thinkers, but also contributes to language development, reading comprehension, and evaluative skills. Author Werner W. Liedtke offers advice on developing questioning strategies and creating practice tasks to ensure that students encounter the critical components of a mathematics program. For each topic, he provides assessment strategies and identifies key prerequisite skills and ideas that can be used for pre-tests, diagnostic purposes, or introductory teaching/learning settings. Making Mathematics Meaningful teaches students to - improve written and oral communication; - connect ideas to previous learning and to settings outside the classroom; - discover strategies for personal estimation and mental mathematics; - learn through problem solving; - develop curiosity, perseverance, and confidence. A few critical LTPP tests were not addressed fully by the AAP, and LTPP staff decided to conduct supplemental testing. The Hot Mix Asphalt (HMA) Laboratory Molded Proficiency Sample Program is one of those supplemental tests. Round 1 testing provided within- and among-laboratory diametral resilient modulus data for tests performed in accordance with SHRP Test Protocol P07. The objectives included

drafting single operator and multi-laboratory test precision statements in testing proficiency status for SHRP laboratories, and preserving test sample information for future analysis. Worksheets, supporting data, analyses, final comments, and conclusions are presented. A complete set of proficiency sample statements in AASHTO and American Society for Testing and Materials (ASTM) format are provided. Research on small groups is highly diverse because investigators who study such groups vary in their disciplinary identifications, theoretical interests, and methodological preferences. The goal of this volume is to capture that diversity, and thereby convey the breadth and excitement of small group research by acquainting students with work on five fundamental aspects of groups. The volume also includes an introductory chapter by the editors which provides an overview of the history of and current state-of-the-art in the field. Together with introductions to each section, discussion questions and suggestions for further reading, make the volume ideal reading for senior undergraduate and graduate students interested in group dynamics.

The present volume was devoted to the third edition of the International Symposium on Algorithmic Game Theory (SAGT), an interdisciplinary scientific event intended to provide a forum for researchers as well as practitioners to exchange innovative ideas and to be aware of each other's efforts and results. SAGT 2010 took place in Athens, on October 18–20, 2010. The present volume contains all contributed papers presented at SAGT 2010 together with the distinguished invited lectures of Amos Fiat (Tel-Aviv University, Israel), and Paul Goldberg (University of Liverpool, UK). The two invited papers are presented at the beginning of the proceedings, while the regular papers follow in alphabetical order (by the authors' names). In response to the call for papers, the Program Committee (PC) received 61 submissions. Among the submissions were four papers with at least one coauthor that was also a PC member of SAGT 2010. For these PC-coauthored papers, an independent subcommittee (Elias Koutsoupias, Paul G. Spirakis, and Xiaotie Deng) made the judgment, and eventually two of these papers were proposed for inclusion in the Scientific Program. For the remaining 57 (non-PC-coauthored) papers, the PC of SAGT 2010 conducted a thorough evaluation (at least 3, and on average 3.9 reviews per paper) and electronic discussion, and eventually selected 26 papers for inclusion in the Scientific Program. An additional tutorial, "Games Played in Physics", was also provided in SAGT 2010, courtesy of the academic research network AlgomGames (Algorithmic Games) of the University of Patras. This book constitutes the refereed proceedings of the 8th International Conference on Combinatorial Optimization and Applications, COCOA 2014, held on the island of Maui, Hawaii, USA, in December 2014. The 56 full papers included in the book were carefully reviewed and selected from 133 submissions. Topics covered include classic combinatorial optimization; geometric optimization; network optimization; optimization in graphs; applied optimization; CSoNet; and complexity, cryptography, and games.

Politics in Scotland is an authoritative introduction to the contemporary political landscape in Scotland and an essential text for undergraduate and postgraduate students of Scottish Politics. Written by leading experts in the field, it is coherently

organised to provide a clear and comprehensive overview of a range of themes in contemporary Scottish Politics. Key topics include: • Government and electoral behaviour. • Representation and political parties in Scotland. • Public policy and Scotland's relationship with the rest of the world. • Scottish politics both in the run up to and after the 2014 referendum. • The Future of Scottish government and politics. This textbook will be essential reading for students of Scottish politics, British Politics, devolution, government and policy.

PRIMA has emerged as a major platform for academic and research exchange on agent technologies. The PRIMA workshop series was initiated as a workshop of the Pacific Rim International Conference in Artificial Intelligence (PRICAI) to provide a forum that would bring together research in the areas of agent technology and multi-agent systems, both in the Pacific Rim region and beyond. The inaugural workshop in the series was held in Singapore in 1998, with subsequent meetings in

Kyoto (1999), Melbourne (2000), Taipei (2001), Tokyo (2002), Seoul (2003), Auckland (2004), Kuala Lumpur (2005) and Guilin (2006). At the 10th PRIMA in Bangkok in November 2007, the Steering Committee agreed that the series had grown in size and achieved a level of maturity to become a conference series of its own.

It was therefore agreed that from Bangkok in 2007 PRIMA would stand for the Pacific Rim International Conference on Multi-Agent Systems. PRIMA 2007 received 102 valid submissions. Each submission was peer-reviewed by at least three referees selected from the Program Committee. As a result of the selection process, 22 submissions were accepted as full research papers, yielding an acceptance rate of 22.22%. In addition the program included 11 application papers and 16 short papers. A special session on Agent-Oriented Software Engineering (AOSE) was organized by Graham Low from the University of New South Wales (Australia) and Ghassan Beydoun from the University of Wollongong (Australia), where papers were invited from the AOSE community, but put through the same rigorous reviewing process. Amigurumi is the Japanese art of knitting or crocheting small stuffed animals and anthropomorphic creatures.

Typically they are kooky little animals but they can also be inanimate objects, like vegetables, that are given faces and limbs. You've been trained and tested and you've been successful. Now, where will you take it from here? This book is intended for the Green Belt or anybody who has attended Six Sigma training and has been coached through a complete project, and who now wants to or needs to step out on their own and manage improvement projects without a dedicated coach. For a Green Belt, it is probable that the first project was coached by another Six Sigma practitioner, either within the organization or consulting for them, and that the coach's performance may have been evaluated based on the success of the Green Belt's project. Now that the first project is done, the coach has likely moved on to the next new Green Belt candidate. So, what happens to yesterday's Green Belt? Detailed in these pages is a user-friendly guide to completing an improvement project quickly and thoroughly. The author has identified the nine most critical elements of a project and presented the tools needed to deliver those nine. A person who has been exposed to Six Sigma training will not have

a difficult time understanding and applying the tools and techniques presented. Even a non-Green Belt will find this material to be usable with only a little coaching. Dotted throughout the book are descriptions of team meetings, five in all, that will serve the purpose of delivering the nine critical elements in a 90-day time frame. The book's final chapter is intended as a guide to process management and process improvement in or outside the context of an improvement project. Once the concepts and topics become familiar to the reader, Chapter 10 can be read independently and repeatedly to help the organization manage its processes and improve them every day. This book constitutes the refereed proceedings of the 5th International Conference on Information Theoretic Security, held in Amsterdam, The Netherlands, in May 2011. The 12 revised full papers presented together with 7 invited lectures were carefully reviewed and selected from 27 submissions. Understanding the minimal requirements for information-theoretic security is a central part of this line of research. Very attractive is the mathematical neatness of the field, and its rich connections to other areas of mathematics, like probability and information theory, algebra, combinatorics, coding theory, and quantum information processing, just to mention the most prominent ones. This book constitutes the refereed proceedings of the 17th Australasian Conference on Information Security and Privacy, ACISP 2012, held in Wollongong, Australia, in July 2012. The 30 revised full papers presented together with 5 short papers were carefully reviewed and selected from 89 submissions. The papers are organized in topical sections on fundamentals; cryptanalysis; message authentication codes and hash functions; public key cryptography; digital signatures; identity-based and attribute-based cryptography; lattice-based cryptography; lightweight cryptography. This volume LNCS 12735 constitutes the papers of the 18th International Conference on the Integration of Constraint Programming, Artificial Intelligence, and Operations Research, CPAIOR 2021, which was held in Vienna, Austria, in 2021. Due to the COVID-19 pandemic the conference was held online. The 30 regular papers presented were carefully reviewed and selected from a total of 75 submissions. The conference program included a Master Class on the topic "Explanation and Verification of Machine Learning Models". Over the past ten years, crochet has developed in an exciting new direction, as many artists have begun using wire to create unique jewelry. Arline Fisch, an internationally acclaimed jeweler and one of the foremost experts in adapting textile techniques for metal, introduces this new form of needlework and provides a wide range of exceptional projects from 16 international designers. An ultimate and timely companion to the wealth of current news on the link between food content and health, by the bestselling authors of "The Fat Counter". Instructions and stitch diagrams for 18 beautiful projects using simple crochet techniques Teaches basic crochet stitches and gives advice on working with wire Create unique necklaces, rings, bracelets, belts, bags, and more The Handbook of Behavioral Operations Management provides easy-to-access insights into why associated behavioral phenomena exist in specific production and service settings, illustrated through ready-to-play games and activities that allow instructors to demonstrate the phenomena in class settings along

with applicable prescriptions for practice. By design the text serves a dual role as a desk/training reference to those practitioners already in the field and presents a comprehensive framework for viewing behavioral operations from a systems perspective. As an interdisciplinary book relating the dynamics of human behavior to operations management, this handbook is an essential resource for practitioners seeking to develop greater system understanding among their workers, as well as for instructors interested in emphasizing the practical relevance of behavior in operational settings. This collection of fully peer-reviewed papers were presented at the 26th Leeds-Lyon Tribology Symposium which was held in Leeds, UK, 14-17 September, 1999. The Leeds-Lyon Symposia on Tribology were launched in 1974, and the large number of references to original work published in the Proceedings over many years confirms the quality of the published papers. It also indicates that the volumes have served their purpose and become a recognised feature of the tribological literature. This year's title is 'Thinning Films and Tribological Interfaces', and the papers cover practical applications of tribological solutions in a wide range of situations. The evolution of a full peer review process has been evident for a number of years. An important feature of the Leeds-Lyon Symposia is the presentation of current research findings. This remains an essential feature of the meetings, but for the 26th Symposium authors were invited to submit their papers for review a few weeks in advance of the Symposium. This provided an opportunity to discuss recommendations for modifications with the authors. Publisher Description
