Fourteen renowned artists have created a series of photographic works about Venice and donated them to be sold to raise funds to preserve the city from decay. These photographic projects comprise the Real Venice exhibition, which will be shown as part of the 54th Venice Biennale. Following up on the great success of *The Moment It Clicks* and *The Hot Shoe Diaries: Big Light from Small Flashes*, legendary magazine photographer Joe McNally takes us on another memorable ride with *Sketching Light*, another trip into the land of light--but this time running

the gamut from small flash to big flash, and everywhere in between. Of course, Joe includes coverage of Nikon Speedlights, but he also covers big flash, as well as "in-between" lights as the Elinchrom Quadra. The exploration of new technology, as well as the explanation of older technology. No matter what equipment Joe uses and discusses, the most important element of Joe's instruction is that it is straightforward, complete, and honest. No secrets are held back, and the principles he talks about apply generally to the shaping and quality of light, not just to an individual model or brand of flash. He tells readers what works and what doesn't via his let's-see-what-happens approach, he shows how he sets up his shots with plentiful sketches and behind-the-scenes production shots, and he does it all with the intelligence, clarity, and wisdom that can only come from shooting in the field for 30 years for the likes of National Geographic, Time, Life, and Sports Illustrated--not to mention the wit and humor of a clearly warped (if gifted)

mind. This is Eugene Richards' 1972 photographic essay, a social document of his home town of Dorchester, Massachusetts, previously only self-published. The book includes additional pictures and a text that speaks of racial tension, violence, poverty and crime, tackling such subjects as the Klu Klux Klan in a way that he did not feel able to at the time of the original publication. On the basis of "Dorchester Days", Richards became a member of Magnum Photos in 1978, leaving to work independently in 1994. His style has set the standard for leading photojournalists such as James Nachtwey and Gilles Peress. Utopian thought and experimental approaches to societal organization have been rare in the last decades of planning and politics. Instead, there is a widespread belief in ecological modernization, that sustainable societies can be created within the frame of the current global capitalist world order by taking small steps such as eco-labeling, urban densification, and recycling. However, in the

context of the current crisis in which resource depletion, climate change, uneven development, and economic instability are seen as interlinked, this belief is increasingly being questioned and alternative developmental paths sought. This collection demonstrates how utopian thought can be used in a contemporary context, as critique and in exploring desired futures. The book includes theoretical perspectives on changing global socio-environmental relationships and political struggles for alternative development paths, and analyzes micro-level practices in co-housing, alternative energy provision, use of green space, transportation, co-production of urban space, peer-to-peer production and consumption, and alternative economies. It contributes research perspectives on contemporary green utopian practices and strategies, combining theoretical and empirical analyses to spark discussions of possible futures. The book presents a collection of papers focused on recent progress in key

areas of photogrammetry for environmental research. Applications oriented to the understanding of natural phenomena and quantitative processes using dataset from photogrammetry (from satellite to unmanned aerial vehicle images) and terrestrial laser scanning, also by a diachronic approach, are reported. The book covers topics of interest of many disciplines from geography, geomorphology, engineering geology, geotechnology, including landscape description and coastal studies. Mains issues faced by the book are related to applications on coastal monitoring, using multitemporal aerial images, and investigations on geomorphological hazard by the joint use of proximal photogrammetry, terrestrial and aerial laser scanning aimed to the reconstruction of detailed surface topography and successive 2D/3D numerical simulations for rock slope stability analyses. Results reported in the book bring into evidence the fundamental role of multitemporal surveys and reliable

reconstruction of morphologies from photogrammetry and laser scanning as support to environmental researches. First published in 2013. Routledge is an imprint of Taylor & Francis, an informa company. Photographic portraits should not be the formal, corporate-style poses of yesteryear, which reveal nothing of the subject's emotion, personality or mood - so believe Sarah Plater and Paul Wilkindon. Theirs is a modern, fresh and vibrant approach that aims to capture a moment in the lifestyle of the person or persons in the picture. This authoritative guide contains clear, concise and jargon-busting text that discusses the essential technical aspects of photography from choosing a camera and equipment to an appreciation of exposure, aperture, metering, shutter speed, depth of field and white balance settings, in addition to how natural light, colour and movement affect a photograph. A guide to posing helps to ensure dynamic and arresting images

Learn how to take professional-quality photographs using the same tricks today's top photographers use (surprisingly, it's easier than you'd think)!

This is a completely, totally updated version of the #1 best-selling digital photography book of all time! It's the award winning, worldwide smash hit, written by Scott Kelby, that's been translated into dozens of different languages.

Here's how Scott describes this book's brilliant premise: "If you and I were out on a shoot, and you asked me, 'Hey, how do I get this flower to be in focus, with the background out of focus?,' I wouldn't stand there and give you a photography lecture. In real life, I'd just say, 'Put on your zoom lens, set your f-stop to f/2.8, focus on the flower, and fire away.' That's what this book is all about: you and I out shooting where I answer questions, give you advice, and share the secrets I've learned just like I would with a

friend—without all the technical explanations and techie photo speak.”

This isn't a book of theory—full of confusing jargon and detailed concepts. This is a book on which button to push, which setting to use, and when to use it. With over 200 of the most closely guarded photographic “tricks of the trade,” this book gets you shooting dramatically better-looking, sharper, more colorful, more professional-looking photos every time.

Each page covers a single concept that makes your photography better. Every time you turn the page, you'll learn another pro setting, tool, or trick to transform your work from snapshots into gallery prints. If you're tired of taking shots that look “okay,” and if you're tired of looking in photography magazines and thinking, “Why don't my shots look like that?” then this is the book for you.

At thirteen years old, Beth's heart was broken when her father died suddenly. But there was a bigger challenge ahead when doctors told her she probably had multiple sclerosis at 22 years old. Beth vowed that this new challenge would not put restrictions on her life and embarked on a lifelong dream to fly for the airlines. Starting

at the small local airport, the aviation world swallowed her whole, and the next five years of her life were as turbulent as an airplane in a thunderstorm, never knowing when, how or if she would emerge. An agonizing love affair with her flight instructor, dangerous risks in the sky and flying broken airplanes for shady companies all intertwined to define her road to the airlines. Beth made it to her goal and was hired by Trans World Airlines in 1989. Flying Alone is told with soul-baring candor, taking readers on a suspenseful journey through the terror, romance and ultimate victory of those years. Guinot (Muséum National d'Histoire Naturelle, Paris, France), and was born out of our admiration for Danièle's immense contributions to her discipline. She has helped reawaken interest on the systematics of brachyuran decapods crustaceans, the true crabs. Furthermore, she has significantly helped to redefine the study of the complete evolutionary process in crabs. A total of 35 of her colleagues have contributed to this volume, submitting papers on those aspects of the Brachyura to which Danièle, herself, has significantly contributed: taxonomy, evolution, morphology, palaeontology and general biology of crabs. This volume is but a small tribute to a highly respected colleague and friend from the active band of researchers that she has helped so much over the years. Whilst camera-specific guides provide the how-to, manual style information on how to use your particular model of camera, this manufacturer-specific guide provides you with all the information you need as a Nikon DSLR

photographer to optimise your workflow and capture great images. Jim White and Tony Sweet show you how to increase the quality of your photos, save time and work smarter, starting with the most pressing questions: Which camera should you use? Which lens is best? Which accessories are must-haves? How can you get the most out of Nikon's Capture NX Software? In-depth, specific features of the newest Nikon DSLRs are also covered, helping you to make your camera really work for you. Complete with practical advice, key workflow solutions and detailed images that display multiple camera functions, this book is a must have for every Nikon photographer. Part of Focal's Digital Workflow series, this is the Nikon version of the popular Canon DSLR: The Ultimate Photographer's Guide. Photogrammetry is a science based technology with more than a century of history and development. During this time, the techniques used to get information about objects represented in photos have

changed dramatically from pure optic mechanical equipment to a fully digital workflow in our days. Parallel to this, the handling became easier, and so its possible also for non-photogrammetrists to use these methods today. This book is especially written for potential users which have no photogram metric education but would like to use the powerful capabilities from time to time or in smaller projects: Geographers, Geologists, Cartographers, Forest Engineers who would like to come into the fascinating field of photogrammetry via "learning by doing". For this reason, this book is not a textbook - for more and deeper the ory, there exists a lot of literature, and it is suggested to use some of this. A special recommendation should be given to the newest book from KONECNY (2002) for basic theory and the mathematical backgrounds or to the book from SCHENK (1999) for the particular situation in digital photogrammetry. For a quick reference

especially to algorithms and technical terms see also the Photogrammetric Guide from ALBERTZ & KREILING (1989). This book includes a CD-ROM which contains all you need from software and data to learn about the various methods from the beginning (scanning of the photos) to final products like ortho images or mosaics. *David Busch's Nikon D780 Guide to Digital Photography* is your all-in-one comprehensive resource and reference for the exciting Nikon D780 digital SLR. Diane Betties describes her photography as "effortless, confident and optimistic, yet sensual and calm". This is reflected in her distinct photographic style and in her love for capturing life's intimate moments, natural beauty and clear composition. In her project 'Ibiza Nudes' she wants to show the viewer a different, lesser-seen side of feminine allure. Doing away with the prolific overtly sexualised context in which women are so often presented, she focuses on the forgotten art of female seduction, showing the sensuality of womanhood in complementing intimate natural surroundings on the beautiful island of Ibiza. Recounts the inside story of the building of the Vietnam Veterans Memorial, and includes the names of the 58,000 Americans who lost their lives in Southeast Asia In sixteen wonderful

stories, Pulitzer Prize-winning author James A. Michener burrows deep into the secret lives of animals and the hidden world of nature. Here he sheds light on nature's most awesome and beguiling handiwork, from the sublime shaping and reshaping of earth's lands and seas to a ridiculous armadillo's assault on a bit of Texas real estate that paid off handsomely. Handpicked from Michener's most popular books, these mini-masterpieces are imbued with the music of the spheres and the heartbeat of creation.
