Disability and Equality Law May 24 2020 This interdisciplinary collection of essays addresses the theoretical, practical and legal dimensions of equality for persons with disabilities. The issues covered include the central problem of defining disability and impairment; the dilemma of same versus different treatment; the balance between autonomy and external influence and support; linkages to other anti-discrimination categories such as race and sex; the place of disability theory within identity politics; and issues of life, death, and our most intimate relationships. The articles reflect a wealth of international viewpoints and interdisciplinary areas which include philosophy, economics, memoirs, cultural studies, empirical studies and legal scholarship. The selection also includes classic texts which set out foundational ideas such as the social model of disability or the goal of integration, alongside essays that critique these conceptual mainstays. This volume brings into sharp focus a wide range of contentious and complex issues in the field of disability studies and is of interest to researchers and students from a wide range of fields.

Essential Principles of Contract and Sales Law in the Northern Pacific Nov 22 2022 Taking an anthropological approach, Essential Principles of Contract and Sales Law in the Northern Pacific highlights how regional customary and traditional law interact with Anglo-American concepts of contract and sales law to produce a unique amalgam of substantive law in this Pacific region. Author and law professor Daniel P. Ryan compiles and discusses the current contract and sales law applicable in the Pacific region, including the Republics

of Palau and the Marshall Islands, Hawaii, Guam, Northern Mariana Islands, American Samoa, and the Federated States of Micronesia. Ryan compares and contrasts this regional law to international standards, including the UN Sale of Goods Convention, the UNIDROIT Principles of Contract Law, UNCITRAL Model Law for E-Commerce, the Uniform Commercial Code, the Revised Uniform Commercial Code, and the Restatement (Second) of Contracts. Essential Principles of Contract and Sales Law in the Northern Pacific is essential reading for members of the judiciary, academics, practitioners, students, and businesses within the region and their major trade partners.

Handbook of Mathematical Models and Algorithms in Computer Vision and Imaging Jul 06 2021 This handbook gathers together the state of the art on mathematical models and algorithms for imaging and vision. Its emphasis lies on rigorous mathematical methods, which represent the optimal solutions to a class of imaging and vision problems, and on effective algorithms, which are necessary for the methods to be translated to practical use in various applications. Viewing discrete images as data sampled from functional surfaces enables the use of advanced tools from calculus, functions and calculus of variations, and nonlinear optimization, and provides the basis of high-resolution imaging through geometry and variational models. Besides, optimization naturally connects traditional model-driven approaches to the emerging data-driven approaches of machine and deep learning. No other framework can provide comparable accuracy and precision to imaging and vision. Written by leading researchers in imaging and vision, the chapters in this handbook all start with gentle introductions, which make this work accessible to graduate students. For newcomers to the field, the book provides a comprehensive and fast-track introduction to the content, to save time and get on with tackling new and emerging challenges. For researchers, exposure to the state of the art of research works leads to an overall view of the entire field so as to guide new research

directions and avoid pitfalls in moving the field forward and looking into the next decades of imaging and information services. This work can greatly benefit graduate students, researchers, and practitioners in imaging and vision; applied mathematicians; medical imagers; engineers; and computer scientists.

United States Code Sep 27 2020 "The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited "U.S.C. 2012 ed." As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office"--Preface.

[Is-703.a](#) Feb 25 2023 Course Overview This course introduces resource management as described in the National Incident Management System (NIMS), and shows how systems for managing resources can be used to improve incident response. The course includes examples of best practices, lessons learned, and job aids to assist the participant in planning for resource management. The course includes the following lessons: -Lesson 1: Resource Management Overview -Lesson 2: Resource Management Planning -Lesson 3: Resource Typing & Readiness -Lesson 4: Resource Management During Incidents -Lesson 5: Resource Management & Complex Incidents -Lesson 6: Course Summary Note: IS-703.a is an updated version of the IS-703 course. The update version of the course includes expanded content about resource typing. If you have successfully completed IS-703, you may want to review the new version of the course, especially lesson 3. For credentialing purposes, the courses are equivalent. Course Objectives: At the conclusion of this course, you should be able to: -Establish systems for describing, inventorying, requesting, and tracking resources. -Activate these systems prior to and during an incident. -Dispatch resources prior to and during an incident. -Deactivate or recall resources during or after incidents. Primary Audience Federal, State, tribal, and local emergency managers; first responders to include incident commanders from all emergency management disciplines; private industry personnel responsible for coordination activities during a disaster; and voluntary agency personnel. Prerequisites N/A. However, completion of IS 700.a, National Incident Management System (NIMS), An Introduction, is recommended.
