*Small Teaching* Oct 22 2022 Employ cognitive theory in the classroom every day Research into how we learn has opened the door for utilizing cognitive theory to facilitate better student learning. But that's easier said than done. Many books about cognitive theory introduce radical but impractical theories, failing to make the connection to the classroom. In *Small Teaching*, James Lang presents a strategy for improving student learning with a series of modest but powerful changes that make a big difference—many of which can be put into practice in a single class period. These strategies are designed to bridge the chasm between primary research and the classroom environment in a way that can be implemented by any faculty in any discipline, and even integrated into pre-existing teaching techniques. Learn, for example: How does one become good at retrieving knowledge from memory? How does making predictions now help us learn in the future? How do instructors instill fixed or growth mindsets in their students? Each chapter introduces a basic concept in cognitive theory, explains when and how it should be employed, and provides firm examples of how the intervention has been or could be used in a variety of disciplines. Small teaching techniques include brief classroom or online learning activities, one-time interventions, and small modifications in course design or communication with students.

Nonmalignant Hematology Sep 21 2022 This book, in Q&A format, addresses a wide range of clinically relevant topics and issues in Nonmalignant Hematology, or “Benign Hematology,” with a view to offering a robust, engaging tool that will assist every hematologist and oncologist (pediatric and adult equally) in making decisions during day-to-day practice. The entire spectrum of the specialty is covered in more than 60 exceptional chapters written by acknowledged authorities in the field. The content is organized into well-designed broad sections on red cell disorders, platelet and coagulation disorders, coagulopathy in systemic diseases, thromboembolic disease and its management (including surgical), immune system and related disorders, hemostasis and thrombosis during pregnancy and in the newborn and elderly, and Transfusion Medicine. A key aspect of the book is the opportunity it affords expert physicians to express well-reasoned opinions regarding complex issues in Nonmalignant Hematology. Readers will find that it provides a practical and immediately applicable compendium of answers to often complex and vexing questions. It will appeal to residents, fellows, house officers and more experienced practitioners around the globe.

*Memory at Work in the Classroom*: Apr 04 2021 Why do some students struggle to understand and retain information, while other students don't? The answer may well lie in the memory system, which is the root of all learning. In *Memory at Work in the Classroom*, Francis Bailey and Ken Pransky expertly guide you through the aspects of human memory most relevant to classroom teachers. Real classroom examples help to deepen your understanding of how memory systems play a central role in the learning process, as well as how culture plays a sometimes surprising role in memory formation and use. The memory systems covered in the book are \* Working Memory: the gateway to learning \* Executive Function: the cognitive skills children need to independently orchestrate their memory systems

in service to learning \*Semantic Memory: the storehouse of a person's knowledge of the world, including academic concepts, and the part of the memory system most affected by culture \* Episodic Memory: rich, multisensory personal memories of specific events \* Autobiographical Memory: one's sense of self, tied directly to student motivation Although the techniques described apply to all students, the authors concentrate on explaining the source of struggling students' academic challenges and provide effective strategies for helping students become better learners. Whether you're a new or a veteran teacher, this book will offer fresh insights into your students' learning difficulties and move you to explore classroom practices that align with the functioning of memory and the ways students learn.

[Analysis of Pretest-Posttest Designs](#) Jul 07 2021 How do you analyze pretest-posttest data? Difference scores? Percent change scores? ANOVA? In medical, psychological, sociological, and educational studies, researchers often design experiments in which they collect baseline (pretest) data prior to randomization. However, they often find it difficult to decide which method of statistical analysis is most appropriate to use. Until now, consulting the available literature would prove a long and arduous task, with papers sparsely scattered throughout journals and textbook references few and far between. *Analysis of Pretest-Posttest Designs* brings welcome relief from this conundrum. This one-stop reference - written specifically for researchers - answers the questions and helps clear the confusion about analyzing pretest-posttest data. Keeping derivations to a minimum and offering real life examples from a range of disciplines, the author gathers and elucidates the concepts and techniques most useful for studies incorporating baseline data. Understand the pros and cons of different methods - ANOVA, ANCOVA, percent change, difference scores, and more Learn to choose the most appropriate statistical test - Numerous Monte Carlo simulations compare the various tests and help you select the one best suited to your data Tackle more difficult analyses - The extensive SAS code included saves you programming time and effort Requiring just a basic background in statistics and experimental design, this book incorporates most, if not all of the reference material that deals with pretest-posttest data. If you use baseline data in your studies, *Analysis of Pretest-Posttest Designs* will save you time, increase your understanding, and ultimately improve the interpretation and analysis of your data.

*Forward-looking External Search as a Driver for Innovation* Jul 19 2022 In this empirical analysis Sara Polier investigates forward-looking external search strategies and their impact on the value contribution of corporate foresight. Based on a mixed method approach combining a quantitative and qualitative analysis of large, R&D-intensive firms, the findings reveal a general positive influence of different search strategies with respect to the scope (i.e. breadth, depth, and distance) and direction of search (i.e. market, science, and intermediary-driven) on the role of foresight as a driver for innovation. This relationship is found to be mediated by a firm's exploratory learning capability, which appears to facilitate the effective transfer of external future-related knowledge into valuable outputs.

The IEA Study of Mathematics III Mar 03 2021 The Second International Mathematics Study was conducted in the schools of 20 education systems under the sponsorship of the International Association for the Evaluation of Educational Achievement (IEA). This is the third of three international reports, each of which focus on a major component of the study. This volume describes the main findings from analyses of classroom processes and mathematic growth by posing such questions as: how successful have the national education systems been in providing the opportunity to learn mathematics by the end of the lower secondary school; what do students at the lower secondary level know across educational systems and what have they learned during their most recent schooling experiences; and what teaching practices are utilized in the mathematics classroom of the various systems and to what extent can these classroom processes explain differences in student achievements?

*The Future of Management Control is Fair* Nov 23 2022 The design of Management Control Systems (MCS) in the context of financial institutions should be reconsidered with regards to their ability to improve organizational justice perceptions. Promoting organizational justice can help banks to build significantly more trust and influence employees' behaviors in the best interest of the organization. Especially the design of Beyond Budgeting as a MCS that emphasizes social control mechanisms and facilitates autonomous working appears to be a promising concept for the design of future MCS in the context of financial institutions.

The *Oxford Handbook of Polling and Survey Methods* Jul 27 2020 The methodologies used to study public opinion are now in flux. The primary polling method of the last half-century, the telephone survey, is rapidly becoming obsolete as a data collection method. At the same time, new methods of contacting potential respondents and obtaining their response are appearing, providing a variety of options for scholars and practitioners. Generally speaking, we are moving from a polling world that was largely interviewer driven over the phone and face-to-face to predominantly interviewer driven self-administered poll environments, New methods of data collection, however,

must still deal with fundamental questions to polling methodology and total survey error including sampling, selection bias, non-response error, poststratification weighting, and questionnaire design features. The Oxford Handbook on Polling and Survey Methods brings together a unique mixture of academics and practitioners, from various backgrounds, academic disciplines, and experiences. In some sense, this is reflective of the interdisciplinary nature of the polling and survey industry: polls and surveys are widely used in academia, government, and the private sector. Designing, implementing, and analyzing high quality, accurate, and cost-effective polls and surveys requires a combination of skills and methodological perspectives. Despite the well-publicized issues that have cropped up in recent political polling, a great deal is known today about how to collect high quality polling and survey data even in complex and difficult environments. Divided into four main sections, the Handbook draws on the existing research and explores data collection methods. It then addresses data analysis and the methods available for combining polling data with other types of data. The next section covers analytic issues, including the new approaches to studying public opinion (ie social media, the analysis of open-ended questions using text analytic tools, and data imputation). The final section focuses on the presentation of polling results, an area where there is a great deal of innovation. A comprehensive overview of the topic, this volume highlights current polling trends provides ideas for the development of new and better approaches for measuring, modeling, and visualizing public opinion and social behavior.

**Why Do They Make Things so Complicated?** Sep 28 2020 In the past 50 years, consumers' buying situations have not become easier. Consumers remain easily overwrought by complex buying situations that involve buying complex products or services, such as laptops or insurances. In such situations, consumers find it difficult to make a decision and must spend high levels of cognitive effort on it. Prior consumer research has addressed the complexity of buying situations in several research streams such as in choice complexity or product complexity literature. However, previous researchers have not reached consensus on what constitutes the complexity of a buying situation. Furthermore, they have mostly concentrated on cognitive constructs and emotional constructs have been rather unexplored. To close these research gaps, this dissertation provides an in-depth conceptualization of complex buying situations by developing a comprehensive reference framework. Furthermore, this dissertation differs from prior research by examining in detail negative emotional responses to complexity (NERCO). A reliable and valid NERCO scale is developed that consists of two factors, emotional resignation and fear of post-purchase dissonance. An experiment investigates the influence of two input variables of the reference framework (1. the number of alternatives in the consumer's price class and 2. the perceived expertise of the salesperson who provides a recommendation in a buying situation) on perceived choice complexity and on NERCO. This dissertation paves the way for numerous directions for future research on the complexity of buying situations by providing theoretical fundamentals in the form of a detailed conceptualization and by precisely defining the research gaps.

**Civic Education in the Twenty-First Century** Nov 30 2020 Imagine an America where governmental institutions, schools, new technologies, and interest groups work together to promote more informed citizens. Civic Education in the Twenty-First Century brings together the research of scholars from various disciplines to show that by expanding what is done in isolation, we can realize such a healthy civic ecology.

**Exploring the Integer Addition and Subtraction Landscape** May 05 2021 Over the past few decades there has been increased interest in how students and teachers think and learn about negative numbers from a variety of perspectives. In particular, there has been debate about when integers should be taught and how to teach them to best support students' learning. This book brings together recent work from researchers to illuminate the state of our understanding about issues related to integer addition and subtraction with a goal of highlighting how the variety of perspectives support each other or contribute to the field in unique ways. In particular, this book focuses on three main areas of integer work: students' thinking, models and metaphors, and teachers' thinking. Each chapter highlights a theoretically guided study centered on integer addition and subtraction. Internationally known scholars help connect the perspectives and offer additional insights through section commentaries. This book is an invaluable resource to those who are interested in mathematics education and numerical thinking.

**Processing Inaccurate Information** Jan 13 2022 Interdisciplinary approaches to identifying, understanding, and remediating people's reliance on inaccurate information that they should know to be wrong. Our lives revolve around the acquisition of information. Sometimes the information we acquire—from other people, from books, or from the media—is wrong. Studies show that people rely on such misinformation, sometimes even when they are aware that the information is inaccurate or invalid. And yet investigations of learning and knowledge acquisition largely ignore encounters with this sort of problematic material. This volume fills the gap, offering theoretical and empirical perspectives on the processing of misinformation and its consequences. The contributors, from cognitive science and education science, provide analyses that represent a variety of methodologies, theoretical orientations, and fields of expertise. The chapters describe the behavioral consequences of relying on misinformation and outline possible

remediations; discuss the cognitive activities that underlie encounters with inaccuracies, investigating why reliance occurs so readily; present theoretical and philosophical considerations of the nature of inaccuracies; and offer formal, empirically driven frameworks that detail when and how inaccuracies will lead to comprehension difficulties. Cognitive and Brain Plasticity Induced by Physical Exercise, Cognitive Training, Video Games and Combined Interventions Feb 02 2021 The premise of neuroplasticity on enhancing cognitive functioning among healthy as well as cognitively impaired individuals across the lifespan, and the potential of harnessing these processes to prevent cognitive decline attract substantial scientific and public interest. Indeed, the systematic evidence base for cognitive training, video games, physical exercise and other forms of brain stimulation such as entrain brain activity is growing rapidly. This Research Topic (RT) focused on recent research conducted in the field of cognitive and brain plasticity induced by physical activity, different types of cognitive training, including computerized interventions, learning therapy, video games, and combined intervention approaches as well as other forms of brain stimulation that target brain activity, including electroencephalography and neurofeedback. It contains 49 contributions to the topic, including Original Research articles (37), Clinical Trials (2), Reviews (5), Mini Reviews (2), Hypothesis and Theory (1), and Corrections (2).

**Holocaust and Conceptions of German(y) by Israeli learners of German (DAF)** Apr 23 2020 The Holocaust is inseparable from the Israeli identities even seven decades following the atrocities during World War II, Israeli daily life is shaped by the horrible crimes committed by the Nazis. This book conceptualizes the intricacies of the Israeli identity in relation to learning German as a foreign language (GFL) in Israel throughout the course of history and the changing conception of Germany. This book includes an analysis of a selection of twenty-five GFL language books which reflect the stigmatization and tabooization of the Holocaust and also the qualitative analysis of a subject pool of 105 learners of GFL. The author finds that identities are co-constituted by four individualized Thought Styles, a concept borrowed from Ludwik Fleck. Thought Styles capture the individual perspective of the language learner's view of Germany and are categorized in this thesis as German Engineering, Cold Germany, Neo-Nazi Germany, and The Other Germany. The research draws from discourse theory, critical psychology, and the oft-overlooked classical theory of Ludwik Fleck. Although the relationship between Germany and Israel has been amicable for the last six decades, the choice for Israelis to learn the language that was used by a nation that once attempted to eradicate the Jewish people is emotive and infinitely complex.
