Audit Education Sep 18 2022 Audit professionals are valued members of society and are expected to be both skilled and ethical in their decision-making. The role of the auditor extends far beyond that of counting beans by demanding a social and political awareness, a technical knowledge, ethical principles and relationship skills. In addition, due to the team-oriented nature of the audit approach, auditors require strong team-building and interpersonal skills. This book offers expert descriptions of, and insights into, how such skills and responsibilities can be inculcated in tertiary education and professional training environments. Unlike other books which focus on auditing as a technical process, this volume examines auditing from a teaching and learning perspective. Expert contributors provide authoritative insights into an audit education which is embedded in accounting practice. The book's descriptions of these insights into improving education for future audit professionals may allow the introduction of new and challenging fields of enquiry. *Audit Education* will be of great interest to educators in tertiary institutions, trainers in professional firms, and key individuals in accounting professional bodies seeking to ensure their members possess acceptable levels of attainment for admission and continued membership. This book was originally published as a special issue of *Accounting Education: an international journal*.

Unaccountable Oct 27 2020 For thousands of years, those who controlled and monitored society's finances-accountants-were often the most powerful, respected, and influential members of the community. From the collectors at communal granaries in the ancient Middle East to the scribes who monitored Queen Victoria's Exchequer, the accountant's role has been to preserve the integrity of financial systems. In the United States, twentieth-century accountants played a vital role in shaping the transparency of U.S. capital markets, counseling the Allies on financial matters in both world wars, advising Congress on the creation of the federal income tax, and inventing the concept of the gross national product. Yet by 2003, the reputation of the public accountant was in tatters. How did the accounting profession in America squander its legacy of public service? What happened to the accountants that presidents, senators, and captains of industry turned to for advice? Why did auditors stop

looking for fraud? How did this once revered profession find itself in this unlikely and humiliating state?
